

# *Database Management & Its Benifits*

---

BY SIMERPREET KAUR

# *Database*

DATABASE IS DEFINED AS AN ORGANIZED COLLECTION OF DATA ABOUT AN ENTITY OR THINGS. DATABASE IS A SHARED COLLECTION OF RELATED DATA USED TO SUPPORT THE ACTIVITIES AND DECISION MAKING OF A PARTICULAR ORGANIZATION. DATABASE IS INTEGRATED AS WELL AS SHARED DATABASES ARE MANAGED GENERALLY BY SOME SPECIAL SOFTWARE KNOWN AS DATABASE MANAGEMENT SYSTEM.

# DATABASE MANAGEMENT SYSTEM

---

✓ **Database management systems** are specially designed applications to create a connection between user and the program and to store data in an organised manner .The purpose of DBMS software is to allow to create ,access,modify and a database . A DBMS stores data in such a manner that it becomes easier and highly efficient to retrieve,manipulate and produce information.Thus , a DBMS is an electronic or computerized record keeping system. It maintains various pieces of information in an integrated & summarized form,instead of keeping them in separate independent files.

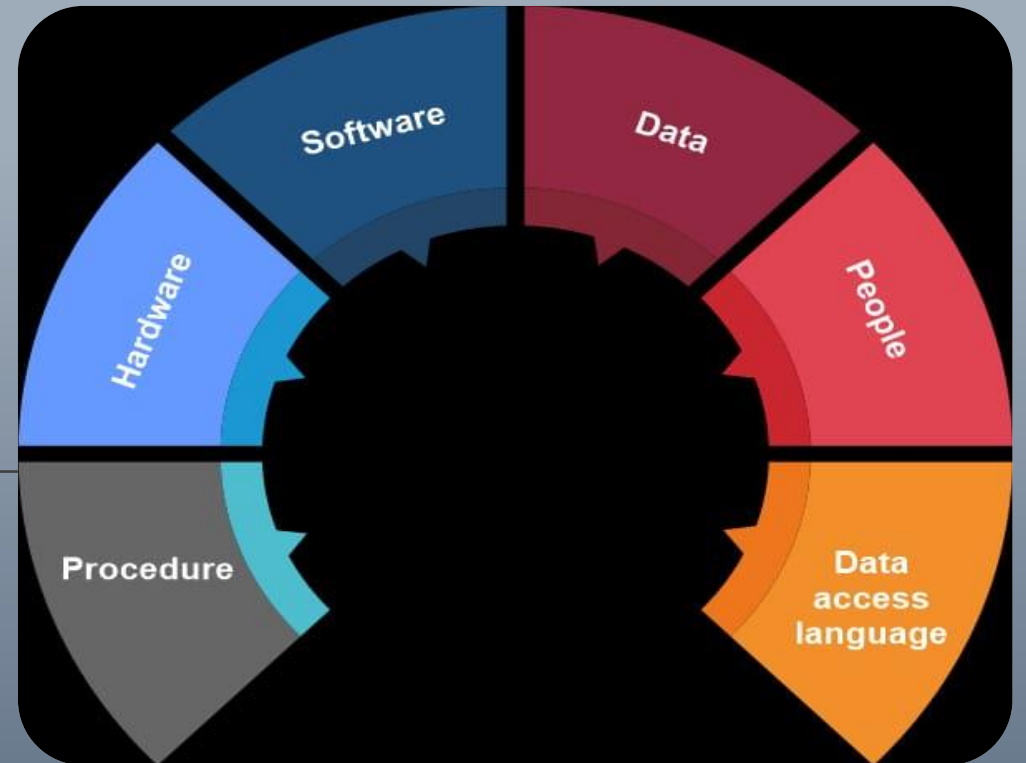

✓ **Examples of DBMS** are: MS Access, My SQL,SQLite,Microsoft SQL Server & many more

# COMPONENTS OF DBMS

---

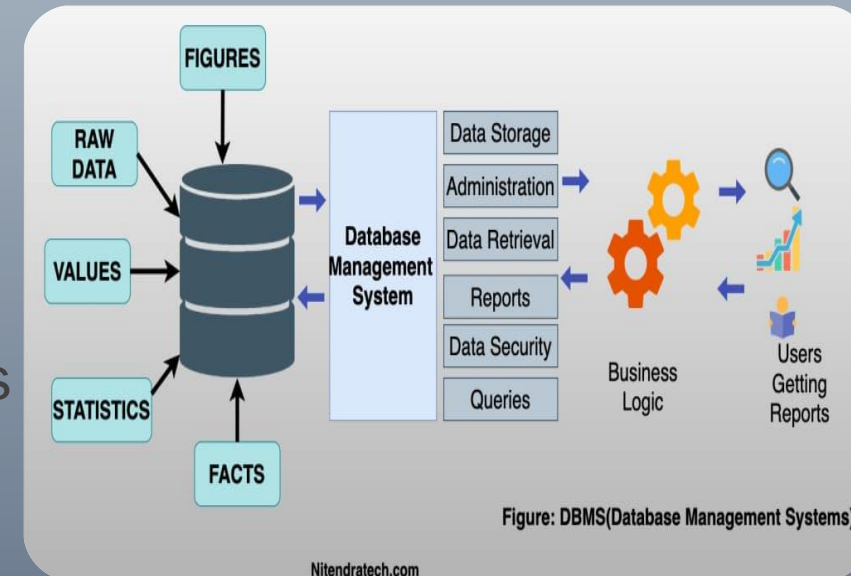

- PROCEDURE
- HARDWARE
- SOFTWARE
- DATA
- PEOPLE
- DATA ACCESS LANGUAGE

# ROLE OF DBMS

A DBMS gives us tools to

- ❑ Store data in structured way
- ❑ Query the database
- ❑ Sort and manipulate data in the database
- ❑ Maintains data consistency in case of multiple users
- ❑ Validate the data entered
- ❑ Check the inconsistencies

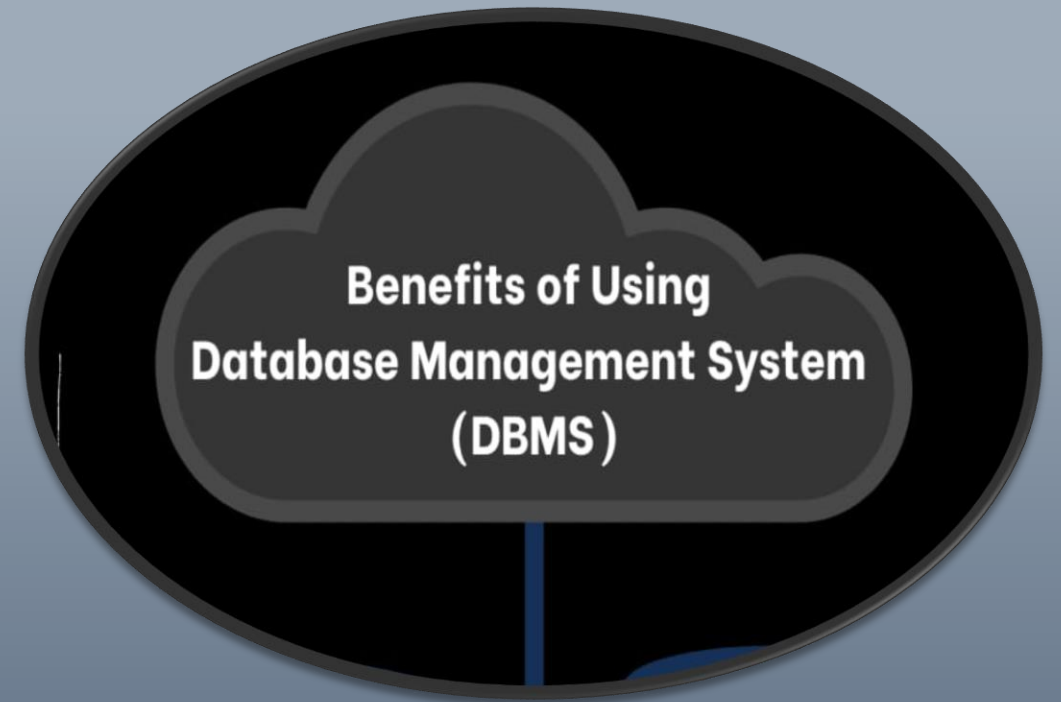

# What are the **Advantages of DBMS?**

# ADVANTAGES OF DBMS

---

- ❑ Control Of Data Redundancy
- ❑ Data Consistency
- ❑ Sharing Of Data
- ❑ Reduced Programming Effort
- ❑ Improved Data Integrity
- ❑ Privacy & Security
- ❑ Improve Backup & Recovery System

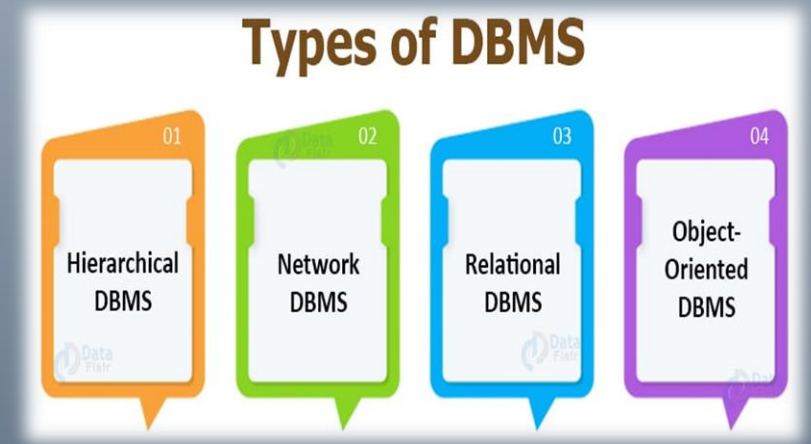

# TYPE OF DBMS

---

- ❖ Hierarchical DBMS
- ❖ Network DBMS
- ❖ Relational DBMS
- ❖ Object –Oriented DBMS
